Professional Summary

Senior Full Stack Developer with 10+ years of experience building and maintaining scalable web applications and high-traffic digital platforms. Strong background in Laravel and Vue.js, with proven experience leading technical teams and delivering reliable, performance-focused solutions.

Professional Experience

2018 - Present
Senior Developer
Future Prime / Inbox Agency / Notícias ao Minuto / Stars Insider

- Lead development and maintenance of APIs, frontend, and CMS for one of Portugal's largest news platforms
- Architected and led complete platform rewrite from legacy codebase, modernizing tech stack and improving maintainability
- Developed internal tools to improve team productivity: Laravel authentication package, Chrome extension for CMS workflows, and custom developer utilities
- Architected and implemented RESTful APIs using Laravel for high-traffic content delivery
- Optimized platform performance through Redis caching strategies and Brotli compression
- Collaborated with cross-functional teams (product, design, editorial) to deliver features while maintaining system reliability

2016 - 2018
Technical Director
MACIV Tecnologias em Comunicação LDA

- Led technical strategy and architecture decisions across multiple web projects
- Managed development workflows and code quality standards
- Oversaw infrastructure, deployments, and system administration

2015 - 2016
Full Stack Web Developer / System Administrator
Solidtech Unipessoal

- Full stack development of web applications using PHP and JavaScript
- Server administration and maintenance on Linux environments
- Database design and optimization using MySQL
- Deployment and monitoring of production systems

March 2013 - June 2013
Intern
Caixa Mágica

- Developed Bash, Perl, and Python scripts to analyze thousands of Word documents and identify usage patterns of tables, images, and other features
- Designed custom icons for a Linux-based school laptop distribution

Technical Skills

Laravel, PHP, JavaScript, CSS, Livewire, Nuxt, Inertia, Vue, MySQL, Redis, Docker, Linux, Node.js, Python

Notable Projects

Vector - Vue Reactivity in Blade Templates
github.com/brunoabpinto/vector

Laravel package that brings Vue reactivity to Blade templates using a familiar

phpvm - PHP Version Manager
github.com/brunoabpinto/phpvm

Open-source PHP version manager inspired by nvm, enabling seamless switching between PHP versions for local development. Built with Bash scripting and used daily in personal workflow.

csrf-refresh - CSRF Refresh for Laravel
github.com/brunoabpinto/csrf-refresh

Automatically refresh CSRF tokens for Laravel applications shortly before they expire for a more seamless user experience.

magic - Laravel inline text editor
github.com/brunoabpinto/magic

Inline text editor for Laravel applications, built with Livewire 4. Allows users to edit text fields directly in the browser, with database persistence and caching support.
